LINING OUT STOCK—(Continued):

CONIFEROUS EVERGREENS

All of these Conifers are grown from cuttings and transplanted in the fields at least twice except those marked "Pots" meaning that these plants, having been rooted in our hot-beds, are growing under glass in pots of the size specified. The field grown plants are not to be confused with "bed" or "frame-grown" stock. They have grown at least one, and in many instances, two years in our full 42" rows where they have been under a state of high cultivation which has developed character. They will be puddled in mud as dug and the roots carefully packed in Sphagnum Moss in ventilated cases for shipment. Potted stock will be shipped in paper pots of the size specified unless we are instructed to shake out.

NOTE: Pot stock will not be ready for shipment until April of 1951.

Chase's Famous Evergreen Liners are grown under ideal conditions to produce the best possible root system.

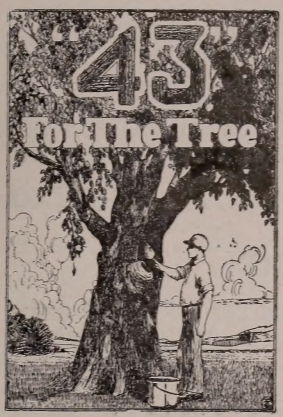
76-A. TREE PAINT—"43 For the Tree":



This is designed primarily for use in painting stubs and surfaces after pruning, or for painting cavities before filling. It is used very successfully by many tree surgeons and landscape gardeners. A can of it should be in the kit of every home owner who uses pruning saws and shears. It is most healing in its effect. Comes in either PLASTIC or LIQUID form.

LIQUID FORM is a heavy liquid that forms an air tight coating and should be applied on all pruned surfaces where the limb is ½-inch in diameter or larger. The medicinal oils penetrate into all parts of the cut or wound. The acids and disinfectant odors will drive away worms.

PLASTIC FORM is used in filling small cavities, cracks, crotches, etc.

Prices are the same on both LIQUID and PLASTIC State which is wanted.
